1 Commissioning overview

Before the WERMA WeASSIST System is ready for use, the WeASSIST Gateway must be linked to the tenant. The individual WeASSIST Transceivers can then be linked and configured with the WeASSIST Gateway.

The commissioning and configuration of the WeASSIST Gateway and the WeASSIST Transceivers can be performed on the computer or on a smartphone/tablet. A camera must be connected to the computer and set up in order to scan the QR code on the computer.

Information and instructions on configuring the WeASSIST can be found in the WERMA Blog at <https://www.werma.com/weassist>.

1.1 WeASSIST Starter Kit

If desired, WERMA will provide a WeASSIST Starter Kit that can be used to simulate the functions of the WeASSIST System.

Content of the WeASSIST Starter Kit:

- 1 gateway
- 1 transceiver
- 14-tier signal tower
- 1 Andon Control
- 1 connection element
- Instructions for the individual elements

Simulation with the supplied Andon Control

1. Install the WeASSIST Transceiver as the lowest element in the signal tower using a bayonet lock.
2. Install the Andon Control at the base of the signal tower using a bayonet lock.
3. Connect the supplied power supply unit to the Andon Control.
4. Simulate the behaviour of a workstation or a machine by pressing the buttons on the Andon Control.

Simulation directly on a machine or with an Andon SmartBox

1. Install the WeASSIST Transceiver as the lowest element in the signal tower using a bayonet lock.
2. Install the connection element at the base of the signal tower.
3. Wire the connection element according to the connection element instructions.
4. Install the WeASSIST Transceiver on the connection element using spherical caps.
5. Start the simulation by operating the machine or with the Andon SmartBox.

2 Commissioning the WeASSIST Gateway

Damage to the WeASSIST Gateway due to improper installation and commissioning!

1. Observe the assembly instructions supplied with the WeASSIST Gateway.
-

1. Connect the WeASSIST Gateway to the network using the network cable supplied.
 2. Connect the WeASSIST Gateway to the power supply using the supplied power supply unit.
 - The WeASSIST Gateway will start.
 - The WeASSIST Gateway connects automatically to the network via DCHP.
-

If necessary, the network configuration of the WeASSIST Gateway can be manually modified, see "Modifying the WeASSIST Gateway settings", p. 10.

3 Modifying the WeASSIST Gateway settings

A browser can be used to access the WeASSIST Gateway's configuration interface to retrieve or modify the following settings of the WeASSIST Gateway, if necessary:

- WeASSIST Gateway status, see "Viewing the status of the WeASSIST Gateway", p. 14
- Network configuration, see "Modifying the network configuration", p. 11
- Admin password, see "Changing the admin password", p. 13
- NTP server, see "Modifying the NTP server", p. 12

The WeASSIST Gateway can also be restarted via the configuration interface, see "Restarting the WeASSIST Gateway", p. 15.

3.1 Logging into the WeASSIST Gateway

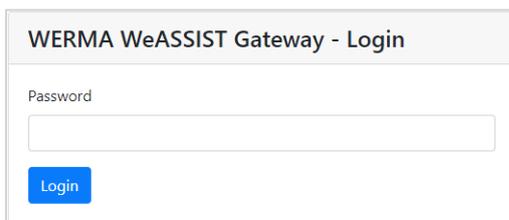

The WeASSIST Gateway address and admin password are located on the back of the WeASSIST Gateway.

The WeASSIST Gateway address cannot be reached with Android devices.

1. Open the browser and enter the WeASSIST Gateway address.
→ The login to the WeASSIST Gateway appears.

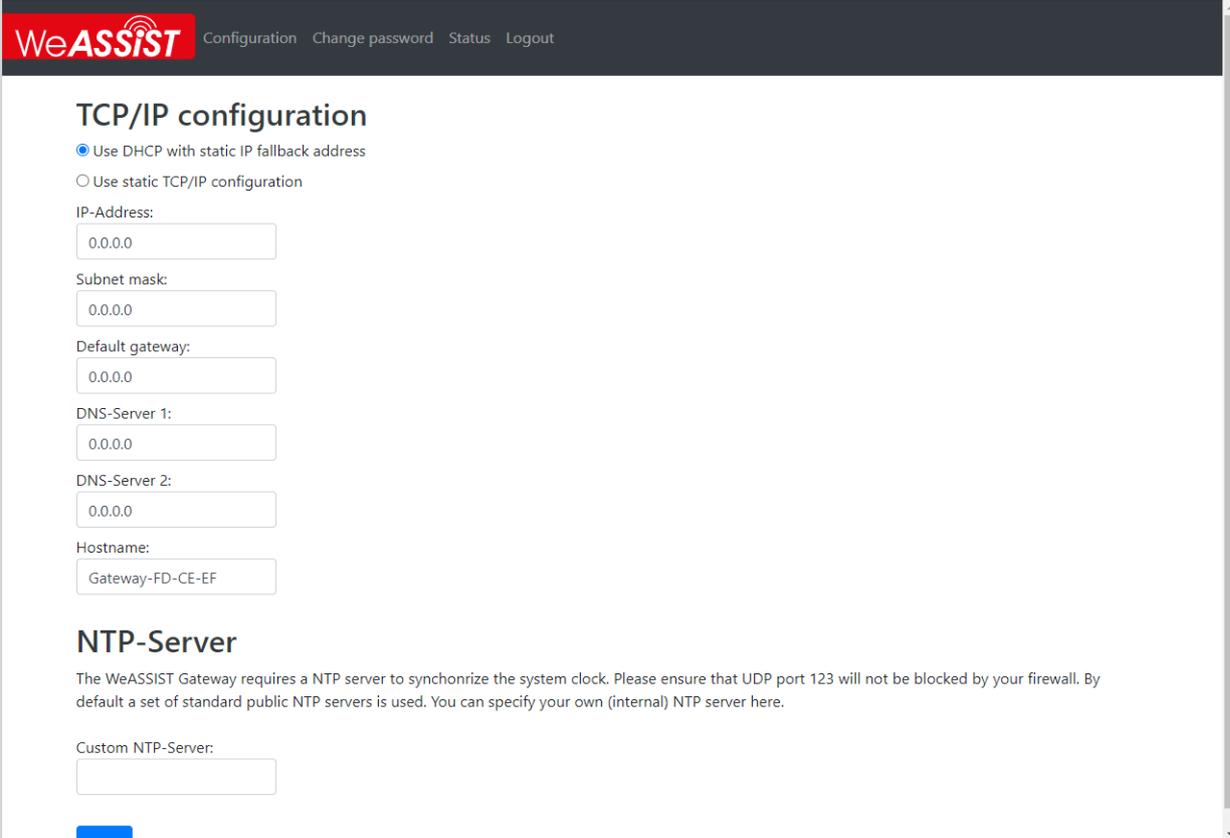

The screenshot shows a web browser window titled "WERMA WeASSIST Gateway - Login". Inside the window, there is a "Password" label above a text input field. Below the input field is a blue "Login" button.

2. Enter the admin password.

3. Click on Login.

→ The configuration interface of the WeASSIST Gateway appears.

The screenshot shows the WeASSIST Gateway configuration interface. At the top, there is a navigation bar with the WeASSIST logo and links for Configuration, Change password, Status, and Logout. The main content area is titled "TCP/IP configuration" and contains two radio button options: "Use DHCP with static IP fallback address" (which is selected) and "Use static TCP/IP configuration". Below these are input fields for IP-Address, Subnet mask, Default gateway, DNS-Server 1, DNS-Server 2, and Hostname, all containing "0.0.0.0" or "Gateway-FD-CE-EF". A section titled "NTP-Server" follows, with a note about NTP server requirements and a "Custom NTP-Server" input field.

3.2 Modifying the network configuration

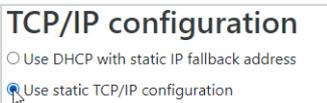

The WeASSIST Gateway connects automatically to the network via DHCP. If the WeASSIST Gateway is to be assigned a fixed IP address, the network configuration of the WeASSIST Gateway can be modified.

If the WeASSIST Gateway does not appear in the network, the WeASSIST Gateway can be connected directly to a computer and can then be reached via the IP address 169.254.13.37.

1. Log into the WeASSIST Gateway, see "Logging into the WeASSIST Gateway", p. 10.

2. Activate the **Use static TCP/IP configuration** option.

This close-up shows the "TCP/IP configuration" section with two radio button options. The first option, "Use DHCP with static IP fallback address", is unselected. The second option, "Use static TCP/IP configuration", is selected and has a mouse cursor hovering over it.

3. Enter the network data into the corresponding fields.

 Your network administrator will provide the requisite data.

4. Click on **Save**.

The network configuration is saved.

A message appears to restart the WeASSIST Gateway.

5. Click on **Restart now** to restart the WeASSIST Gateway with the changed network configuration.
- Or -
Make further settings and restart the WeASSIST Gateway at a later time see "Restarting the WeASSIST Gateway", p. 15).

3.3 Modifying the NTP server

The WeASSIST Gateway uses a number of standard public NTP servers to synchronise the system clock. If necessary, another NTP server can be used.

 Make sure that the UDP port 123 in the firewall is open, not blocked.

1. Log into the WeASSIST Gateway, see "Logging into the WeASSIST Gateway", p. 10.
2. Enter the address of the NTP server in the **Custom NTP-Server** field in the **NTP-Server** area.

NTP-Server

The WeASSIST Gateway requires a NTP server to synchronize the system clock. Please ensure that UDP port 123 will not be blocked by your firewall. By default a set of standard public NTP servers is used. You can specify your own (internal) NTP server here.

Custom NTP-Server:

3. Click on **Save**.

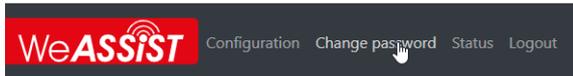

3.4 Changing the admin password

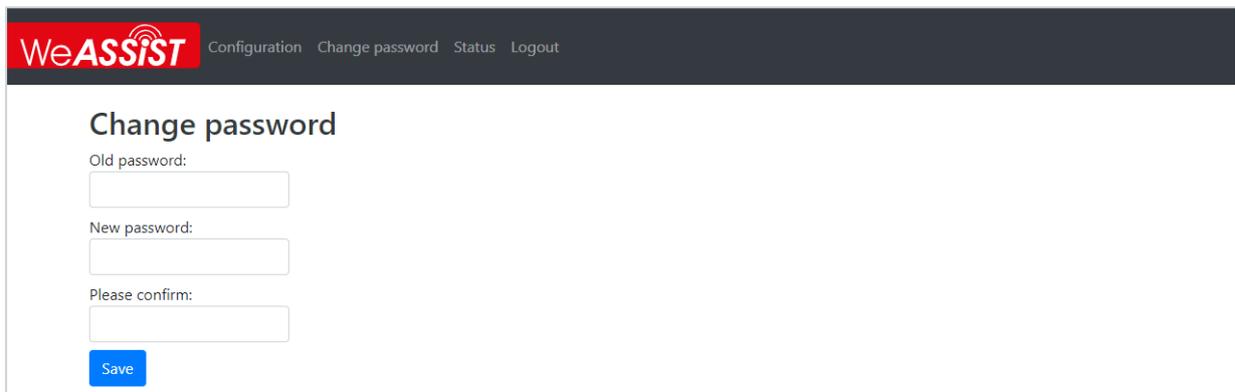

No access to the WeASSIST Gateway due to an incorrect password!

1. Note the changed admin password.

1. Log into the WeASSIST Gateway, see "Logging into the WeASSIST Gateway", p. 10.
2. Click on **Change password** in the navigation bar.

→ The page to change the admin password is displayed.

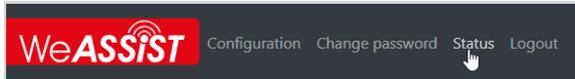

The screenshot shows the 'Change password' page. At the top, there is a navigation bar with the WeASSIST logo and links for 'Configuration', 'Change password', 'Status', and 'Logout'. The main content area is titled 'Change password' and contains three input fields: 'Old password:', 'New password:', and 'Please confirm:'. Below these fields is a blue 'Save' button.

3. Enter the previous admin password in the **Old password** field.
4. Enter a new admin password in the **New password** and **Please confirm** fields.
5. Click on **Save**.

3.5 Viewing the status of the WeASSIST Gateway

1. Log into the WeASSIST Gateway, see "Logging into the WeASSIST Gateway", p. 10.
2. Click on **Status** in the navigation bar.

→ The status of the WeASSIST Gateway is displayed.

Gateway Status

System time: Wednesday, March 16, 2022 at 6:05:38 PM GMT+01:00
 Uptime: 0 days 0 hours 38 minutes 52 seconds
 CPU usage: 25.2%
 Total memory: 493 MB
 Used memory: 124 MB
 Cached/buffered memory: 297 MB
 Free memory: 72 MB

Messaging Service Status

Cloud connection

Connected: true
 Status message: Connected to primary IoT Hub ([Show Connection Log](#))
 Batches in sending queue: 0
 Total number of transmitted batches: 174
 Method calls from the cloud: 0 (0 failed)

Queue name	Current	Total	Avg. wait (ms)	Avg. processing (ms)	Description
S1ReceiveBufferRouter.WorkerQueue	0	0			Number of cached device messages
S2CompressionWorker.InProcessQueue	0	0			
S2CompressionWorker.WorkerQueue	0	0			
S3CompressionRouter.WorkerQueue	0	0			
S4SendCloudRouter.WorkerQueue	1	180	0.1		7.5 Current should be 1 or 0
S5OfflineCacheRouter.WorkerQueue	0	0			Cloud connection issues if Current>0

Offline cache

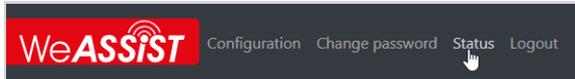

Number of cached batches: 0

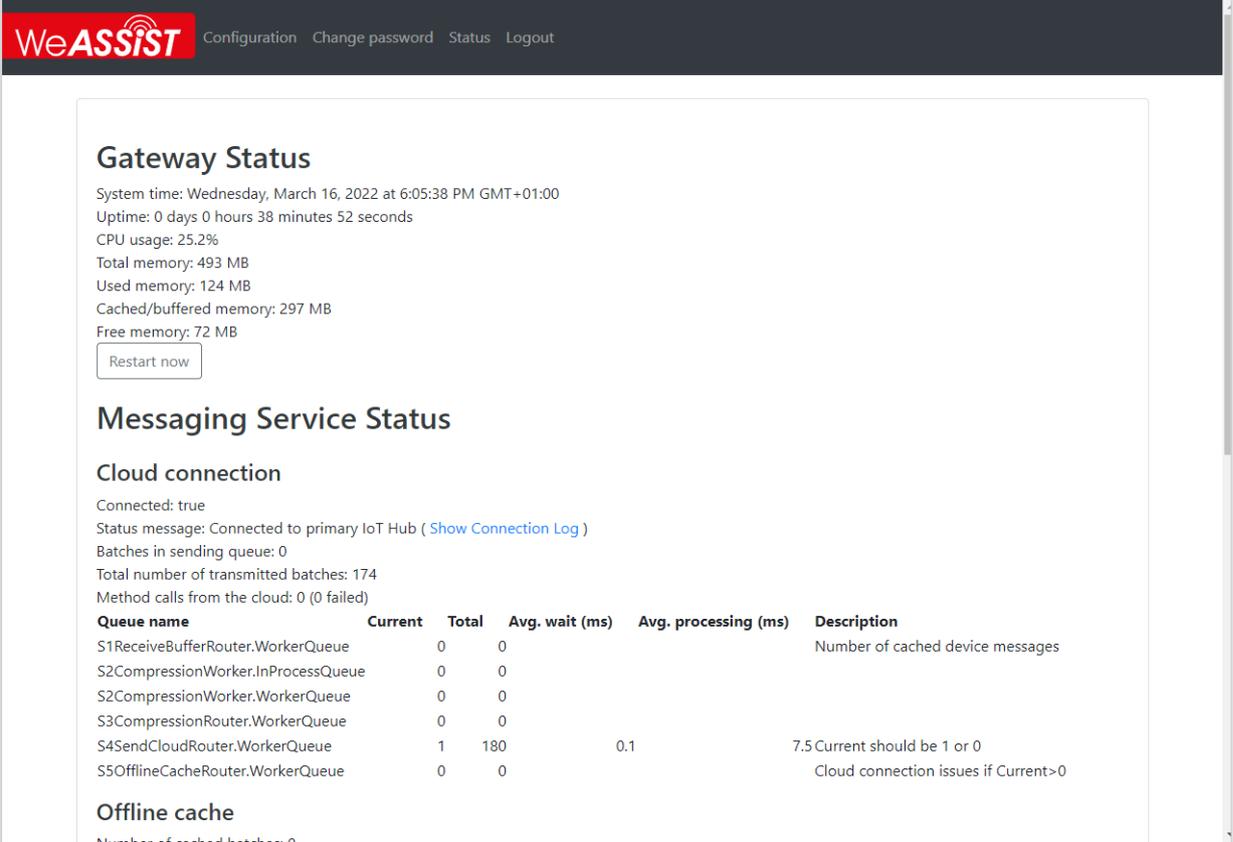

If an incorrect system time (**System time**) is displayed in the **Gateway Status** area, there may be no connection to an NTP server. In this case, the NTP server can be modified (see "Modifying the NTP server", p. 12).

3.6 Restarting the WeASSIST Gateway

1. Log into the WeASSIST Gateway, see "Logging into the WeASSIST Gateway", p. 10.
2. Click on **Status** in the navigation bar.

→ The status of the WeASSIST Gateway is displayed.

→ The WeASSIST Gateway will restart.

4 Linking the WeASSIST Gateway to the tenant

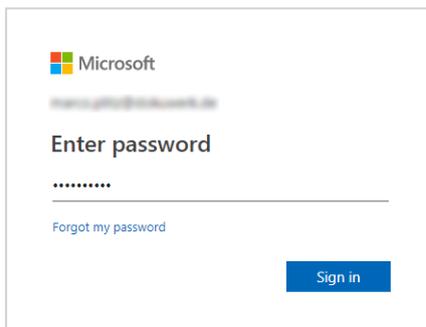

When ordering the necessary hardware, WERMA created a tenant and linked it to an email address. All devices in the WERMA WeASSIST System are managed via the tenant. The access data has been sent via a confirmation email from WERMA.

Initially, the WeASSIST Gateway must be linked once to the tenant.

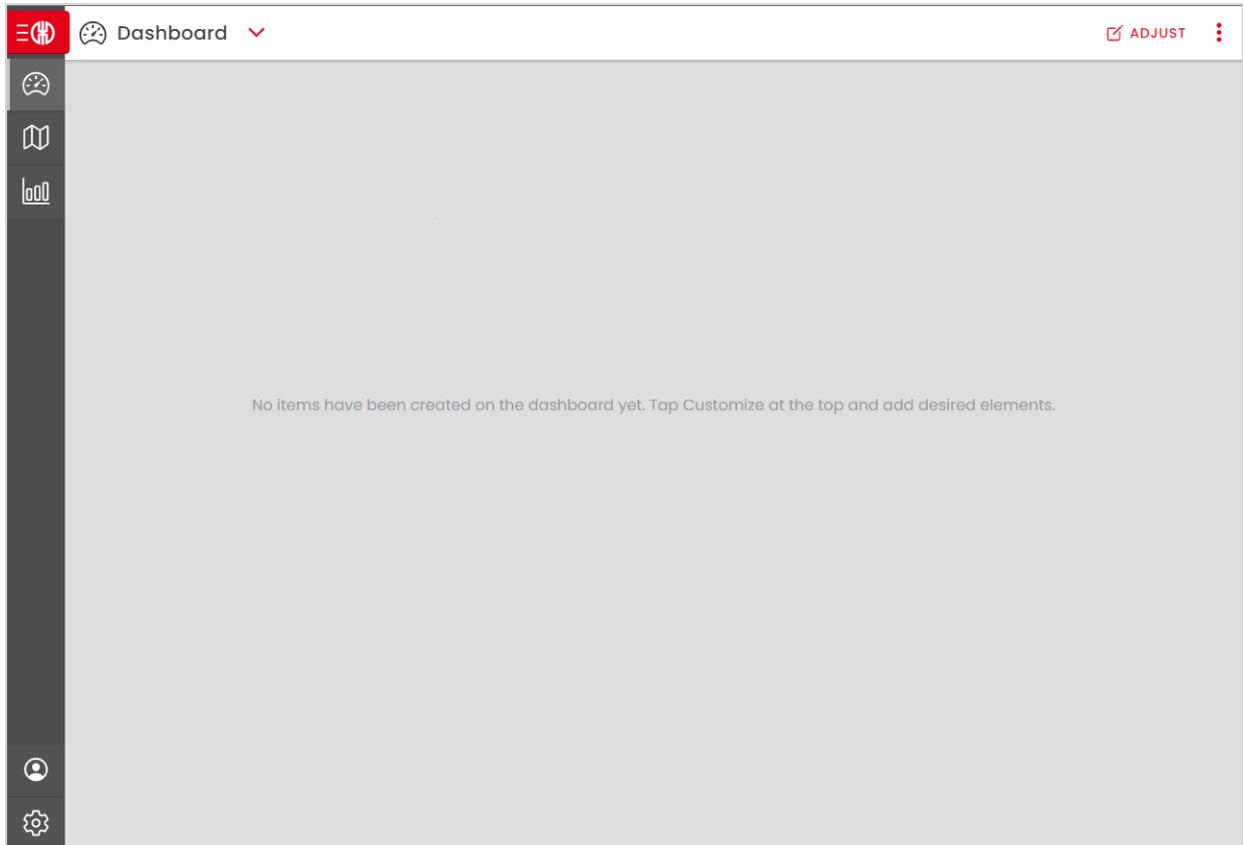

1. Click on **Accept invitation** in the confirmation email or go to the website <https://we-assist.werma.com/>.
→ The WeASSIST login page appears.

2. Enter the email address associated with the tenant and click on **LOGIN**.

3. Enter the password and click on **Sign in**.
→ The WeASSIST **Dashboard** appears.

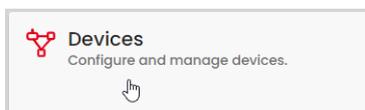

4. Click on **Administration** at the bottom left.

→ The **Administration** screen appears.

5. Click on **Device**.

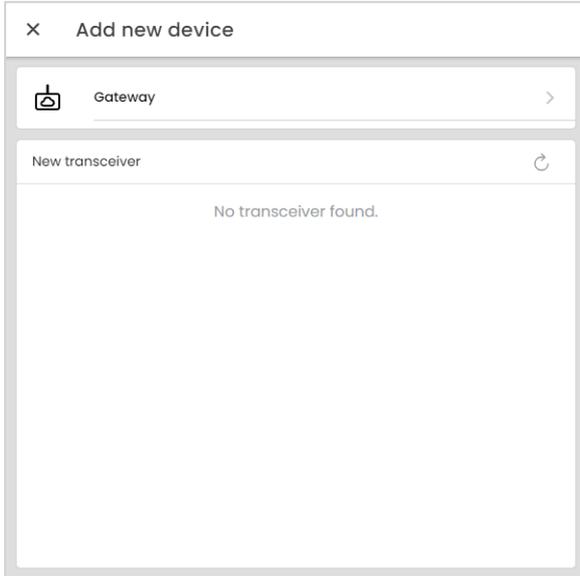

→ The **Devices** screen appears.

6. Click on **Add new device**.

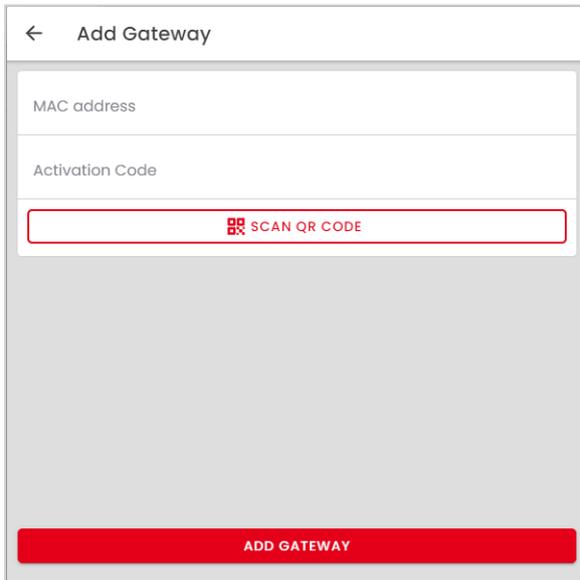

→ The **Add new devices** dialog appears.

7. Click on **Gateway**.

→ The **Add Gateway** dialog appears.

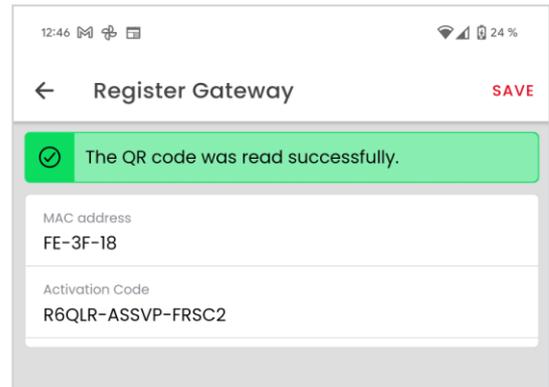

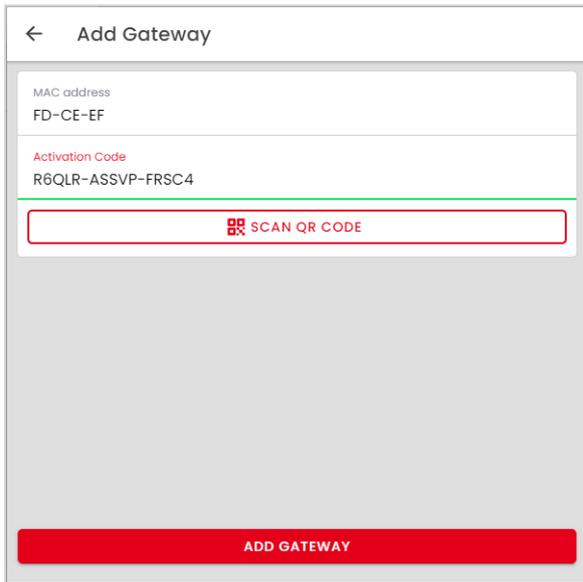

8. Enter the MAC address and the WeASSIST Gateway activation code.

- or -

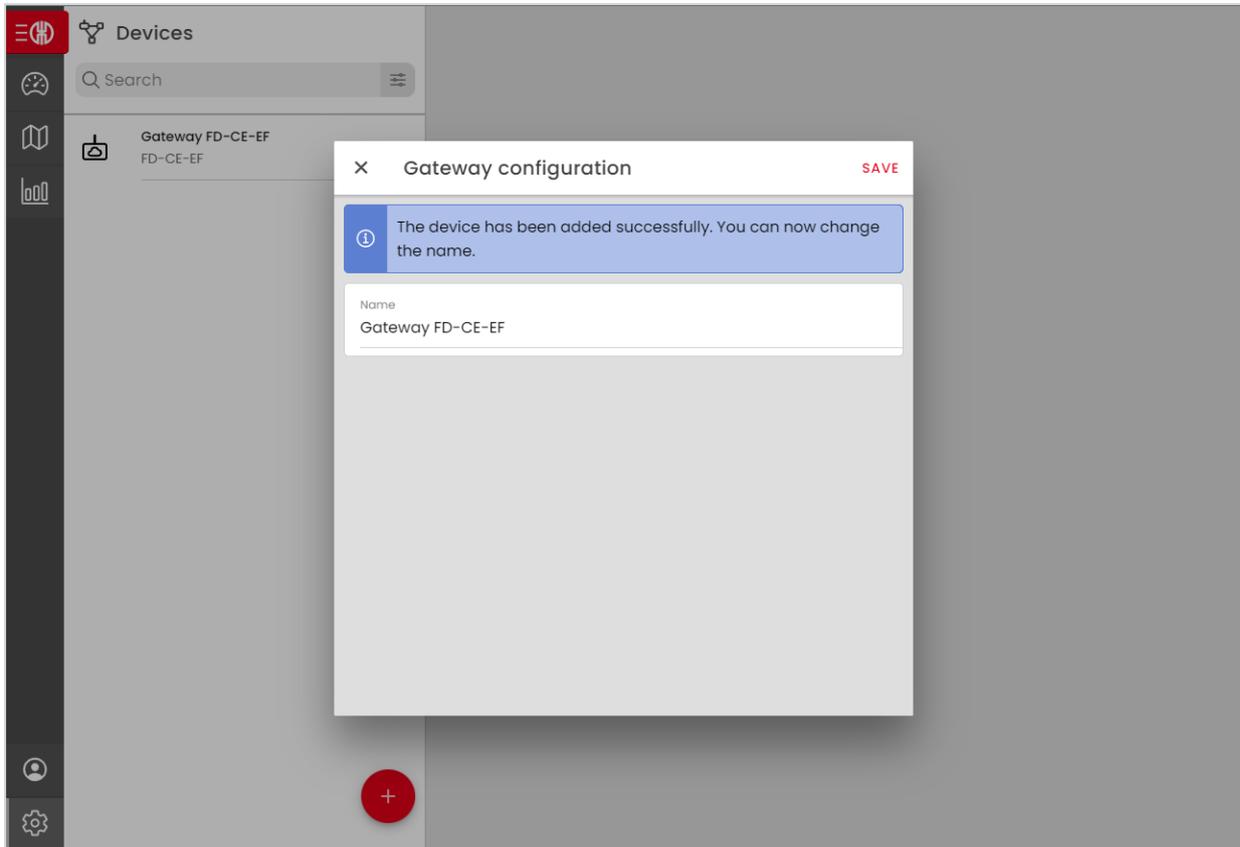

Click on **Scan barcode** and scan the barcode on the back of the WeASSIST Gateway with the camera.

The barcode must be scanned using a tablet, a smartphone, or the camera on the computer on which the tenant is being set up.

- 9. Click on **Save**.
→ The WeASSIST Gateway has been linked to the tenant and added to the **Devices**.

- 10. If necessary, enter a description for the WeASSIST Gateway in the **Name** field.
- 11. Click on **Save**.

5 Linking WeASSIST Transceivers

After the WeASSIST Gateway has been linked, the WeASSIST Transceivers can be linked and configured with the WeASSIST Gateway.

As soon as a WeASSIST Transceiver is connected to the power supply, the WeASSIST Transceiver connects to the nearest WeASSIST Gateway.

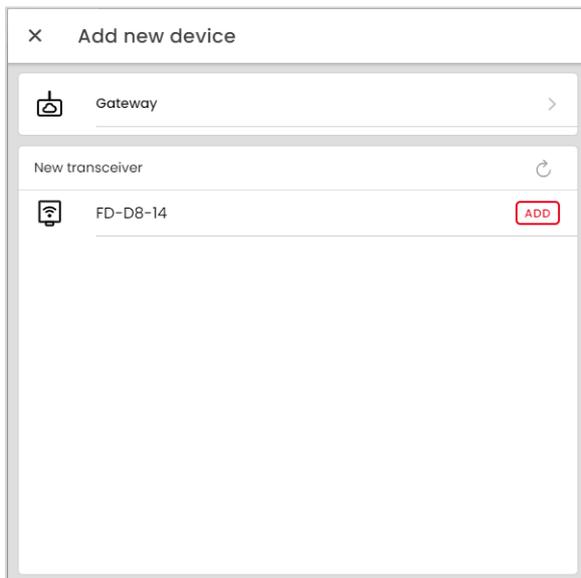

Damage to the WeASSIST Transceiver due to improper installation and commissioning!

1. Observe the assembly instructions supplied with the WeASSIST Transceiver.
2. Install the WeASSIST Transceiver in the signal tower and connect the signal tower to the power supply.
→ The WeASSIST Transceiver connects to the nearest gateway.
3. Click on Add new device.

→ The **Add new devices** dialog appears.

→ The WeASSIST Transceiver appears in the **Add new devices** dialog in the **New transceiver** area.

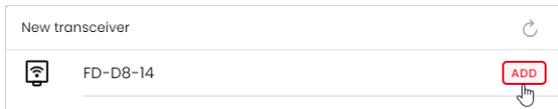

If the WeASSIST Transceiver does not appear in the **New transceiver** area:

4. Click on **Refresh**.

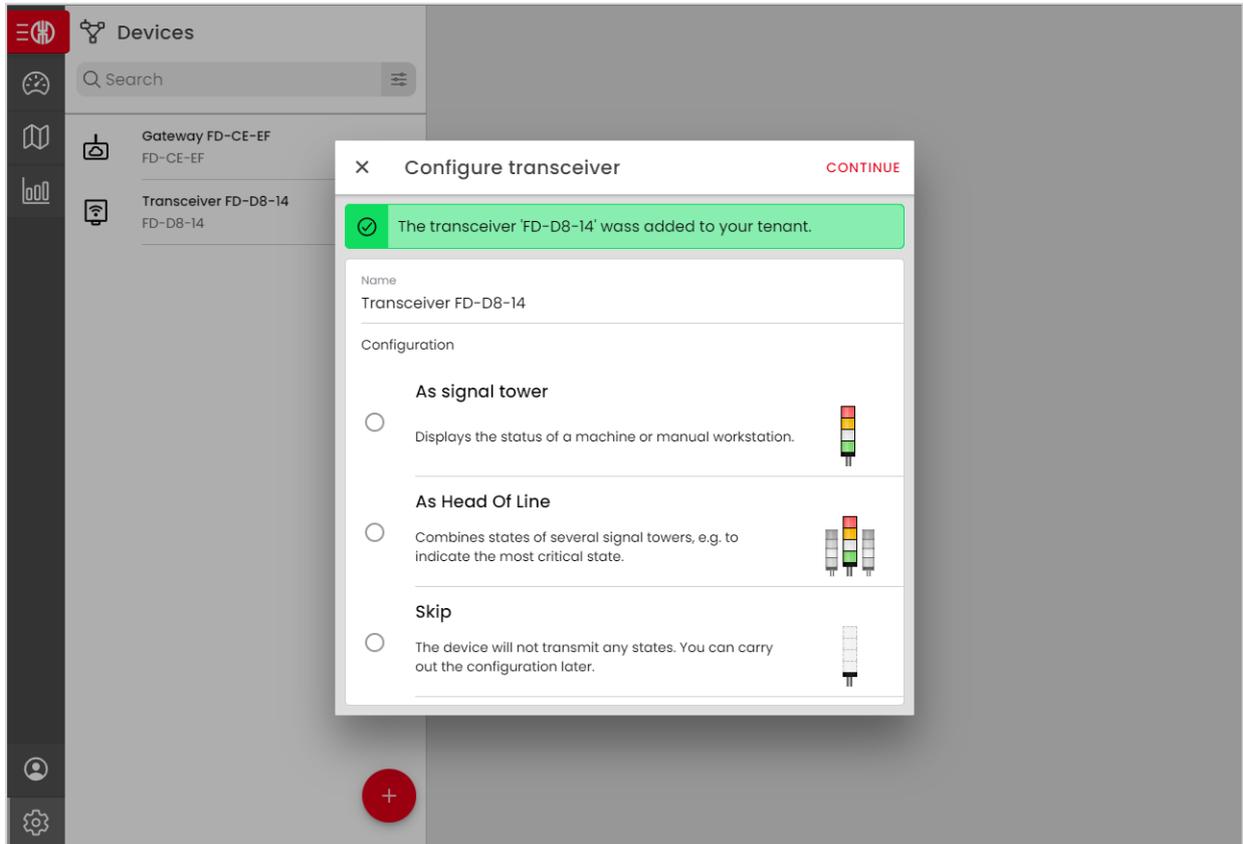

As soon as the WeASSIST Transceiver appears in the **New transceiver** area:

5. Click on Add.

→ The WeASSIST Transceiver is linked to the WeASSIST Gateway and appears in the **Devices**.

6. Select the **As signal tower or **As Head Of Line** option and click on **Next** to configure the signal tower.**

- or -

Select the **Skip** option and click on **Next** to configure the signal tower at a later time.

Information and instructions on configuring the signal tower and additional configuration of the WeASSIST can be found in the WERMA Blog at <https://www.werma.com/weassist>.

1 Übersicht Inbetriebnahme

Bevor das WERMA WeASSIST System einsatzbereit ist muss das WeASSIST Gateway mit dem Tenant verknüpft werden. Anschließend können die einzelnen WeASSIST Transceiver mit dem WeASSIST Gateway verknüpft und konfiguriert werden.

Die Inbetriebnahme und Konfiguration des WeASSIST Gateways und der WeASSIST Transceiver können am Computer oder am Smartphone/Tablet durchgeführt werden. Zum Scannen des QR-Codes am Computer muss am Computer eine Kamera angeschlossen und eingerichtet sein.

Informationen und Anleitungen zur Konfiguration von WeASSIST stellt der WERMA Blog unter <https://www.werma.com/weassist> zur Verfügung.

1.1 WeASSIST-Starterkit

Auf Wunsch stellt WERMA ein WeASSIST-Starterkit zur Verfügung, mit dem die Funktion des WeASSIST-Systems simuliert werden kann.

Inhalt des WeASSIST-Starterkit:

- 1 Gateway
- 1 Transceiver
- 14-Stufige Signalsäule
- 1 Andon Control
- 1 Anschlusselement
- Anleitungen der Einzelemente

Simulation mit dem mitgelieferten Andon Control

1. WeASSIST Transceiver mittels Bajonettverschluss als unterstes Element in der Signalsäule montieren.
2. Andon Control mittels Bajonettverschluss am Fuß der Signalsäule montieren.
3. Mitgeliefertes Netzteil an Andon Control anschließen.
4. Verhalten eines Arbeitsplatzes oder eine Maschine durch Drücken der Tasten des Andon Control simulieren.

Simulation direkt an einer Maschine oder mit einer Andon SmartBox

1. WeASSIST Transceiver mittels Bajonettverschluss als unterstes Element in der Signalsäule montieren.
2. Anschlusselement am Fuß der Signalsäule montieren.
3. Anschlusselement entsprechend der Anleitung des Anschlusselements verkabeln.
4. WeASSIST Transceiver mittels Kalotten am Anschlusselement montieren.
5. Simulation durch Betrieb der Maschine oder durch Andon SmartBox starten.

2 WeASSIST Gateway in Betrieb nehmen

Beschädigung des WeASSIST Gateways durch unsachgemäße Montage und Inbetriebnahme!

1. Mit dem WeASSIST Gateway mitgelieferte Montageanleitung beachten.

1. WeASSIST Gateway per mitgeliefertem Netzwerk-Kabel an Netzwerk anschließen.
2. WeASSIST Gateway per mitgeliefertem Netzteil an Stromanschluss anschließen.
 - Das WeASSIST Gateway startet.
 - Das WeASSIST Gateway verbindet sich automatisch per DHCP mit dem Netzwerk.

Bei Bedarf kann die Netzwerkkonfiguration des WeASSIST Gateways manuell angepasst werden, siehe "Einstellungen des WeASSIST Gateways anpassen", S. 28.

3 Einstellungen des WeASSIST Gateways anpassen

Über einen Browser kann die Konfigurationsoberfläche des WeASSIST Gateways aufgerufen werden, um bei Bedarf folgende Einstellungen des WeASSIST Gateways abzurufen oder anzupassen:

- Status des WeASSIST Gateways, siehe "Status des WeASSIST Gateways anzeigen", S. 32
- Netzwerkkonfiguration, siehe "Netzwerkkonfiguration anpassen", S. 29
- Admin-Passwort, siehe "Admin-Passwort ändern", S. 31
- NTP-Server, siehe "NTP-Server anpassen", S. 30

Zusätzlich kann das WeASSIST Gateway über die Konfigurationsoberfläche neu gestartet werden, siehe "WeASSIST Gateway neu starten", S. 33.

3.1 Am WeASSIST Gateway anmelden

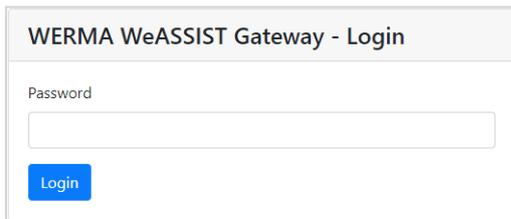

Die Adresse des WeASSIST Gateways und das Admin-Passwort befinden sich auf der Rückseite des WeASSIST Gateways.

Die Adresse des WeASSIST Gateways kann nicht mit Android-Geräten aufgelöst werden.

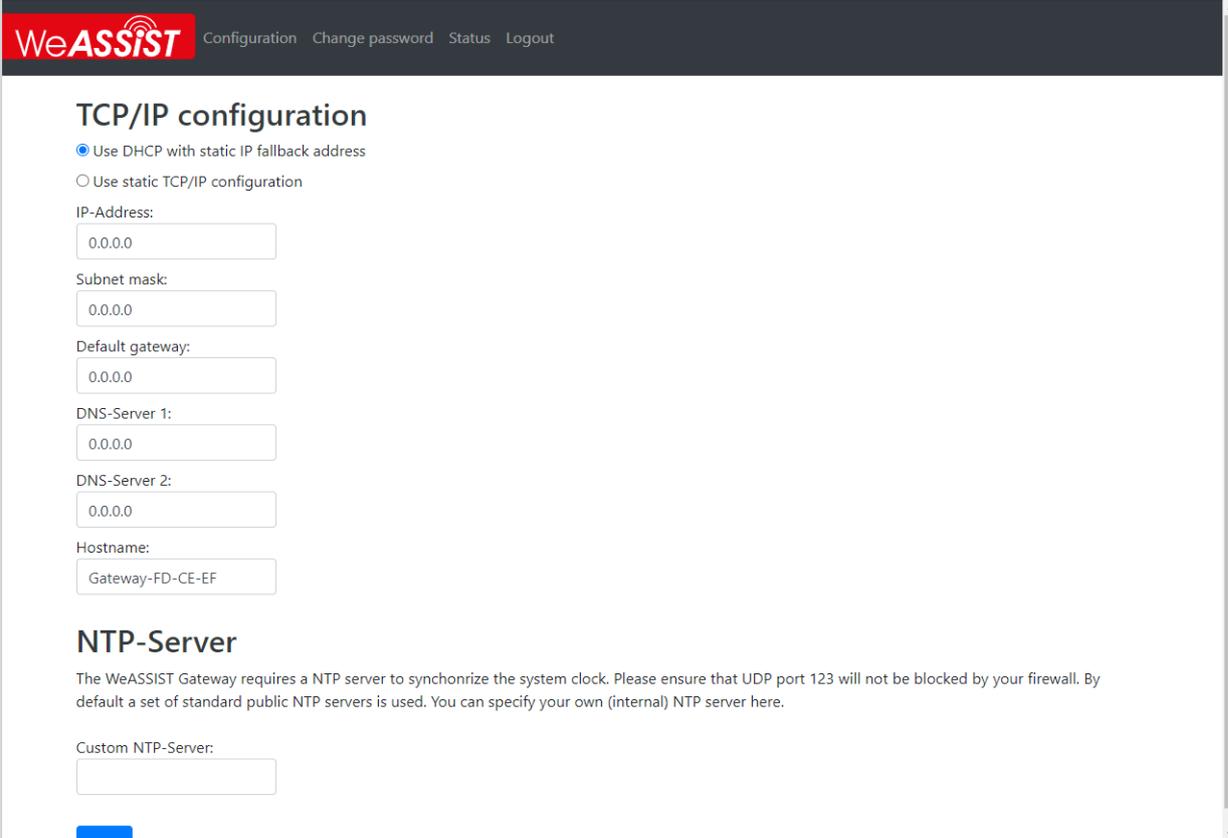

1. Browser öffnen und Adresse des WeASSIST Gateways eingeben.
→ Die Anmeldung des WeASSIST Gateways erscheint.

2. Admin-Passwort eingeben.

3. Auf **Login** klicken.

→ Die Konfigurationsoberfläche des WeASSISTGateways erscheint.

The screenshot shows the WeASSIST Gateway configuration interface. At the top, there is a navigation bar with the WeASSIST logo and links for Configuration, Change password, Status, and Logout. The main content area is titled "TCP/IP configuration" and contains two radio button options: "Use DHCP with static IP fallback address" (which is selected) and "Use static TCP/IP configuration". Below these are input fields for IP-Address, Subnet mask, Default gateway, DNS-Server 1, DNS-Server 2, and Hostname, all containing "0.0.0.0" or "Gateway-FD-CE-EF". A section titled "NTP-Server" follows, with a note explaining the requirement for an NTP server and a "Custom NTP-Server" input field.

3.2 Netzwerkkonfiguration anpassen

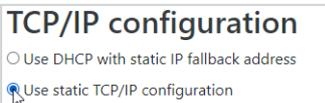

Das WeASSIST Gateway verbindet sich automatisch per DHCP mit dem Netzwerk. Falls dem WeASSIST Gateway eine fest IP-Adresse zugeordnet werden soll, kann die Netzwerkkonfiguration des WeASSIST Gateways angepasst werden.

Falls das WeASSIST Gateway nicht im Netzwerk erscheint, kann das WeASSIST Gateway direkt mit einem Computer verbunden werden und ist dann über die IP-Adresse 169.254.13.37 erreichbar.

1. Am WeASSIST Gateway anmelden, siehe "Am WeASSIST Gateway anmelden", S. 28.

2. Option **Use static TCP/IP configuration** aktivieren.

This close-up shows the "TCP/IP configuration" section with two radio buttons. The top one, "Use DHCP with static IP fallback address", is unselected. The bottom one, "Use static TCP/IP configuration", is selected and has a mouse cursor hovering over it.

3. Daten des Netzwerks in den entsprechenden Feldern eingeben.

 Die notwendigen Daten stellt der Netzwerk-Administrator zur Verfügung.

4. Auf **Save** klicken.

Die Netzwerkkonfiguration wird gespeichert.

Ein Hinweis zum Neustart des WeASSIST Gateways erscheint.

5. Auf **Restart now** klicken, um das WeASSIST Gateway mit der geänderten Netzwerkkonfiguration neu zu starten.

- oder -

Weitere Einstellungen vornehmen und das WeASSIST Gateway zu einem späteren Zeitpunkt neu starten siehe "WeASSIST Gateway neu starten", S. 33.

3.3 NTP-Server anpassen

Zur Synchronisation der Systemuhr verwendet das WeASSIST Gateway eine Reihe von öffentlichen Standard-NTP-Servern. Bei Bedarf kann ein anderer NTP-Server verwendet werden.

 Sicherstellen, dass der UDP-Port 123 in der Firewall freigegeben ist und nicht blockiert wird.

1. Am WeASSIST Gateway anmelden, siehe "Am WeASSIST Gateway anmelden", S. 28.

2. Im Bereich **NTP-Server** im Feld **Custom NTP-Server** die Adresse des NTP-Servers eintragen.

NTP-Server

The WeASSIST Gateway requires a NTP server to synchronize the system clock. Please ensure that UDP port 123 will not be blocked by your firewall. By default a set of standard public NTP servers is used. You can specify your own (internal) NTP server here.

Custom NTP-Server:

3. Auf **Save** klicken.

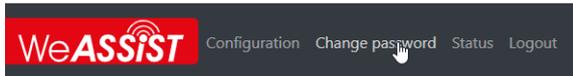

3.4 Admin-Passwort ändern

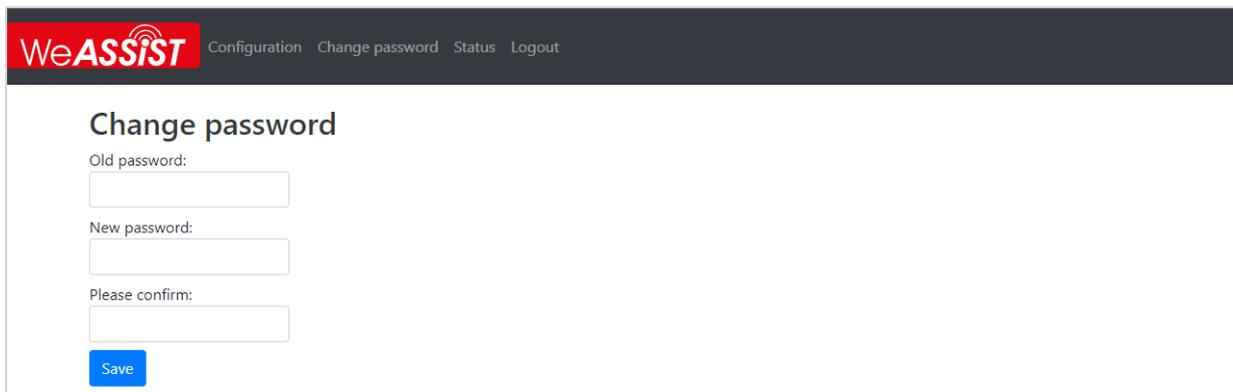

Kein Zugriff auf das WeASSIST Gateway durch falsches Admin-Passwort!

1. Geändertes Admin-Passwort notieren.

1. Am WeASSIST Gateway anmelden, siehe "Am WeASSIST Gateway anmelden", S. 28.
2. In der Navigationsleiste auf **Change password** klicken.

→ Die Seite zum Ändern des Admin-Passworts wird angezeigt.

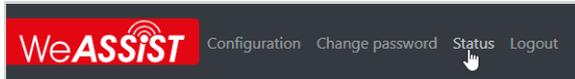

The screenshot shows the 'Change password' page. At the top, there is a dark navigation bar with the 'WeASSIST' logo and links for 'Configuration', 'Change password', 'Status', and 'Logout'. Below the navigation bar, the page title 'Change password' is displayed. The form contains three input fields: 'Old password:', 'New password:', and 'Please confirm:'. A blue 'Save' button is located at the bottom of the form.

3. Bisheriges Admin-Passwort im Feld **Old password** eingeben.
4. Neues Admin-Passwort in den Feldern **New password** und **Please confirm** eingeben.
5. Auf **Save** klicken.

3.5 Status des WeASSIST Gateways anzeigen

1. Am WeASSIST Gateway anmelden, siehe "Am WeASSIST Gateway anmelden", S. 28.
2. In der Navigationsleiste auf **Status** klicken.

→ Der Status des WeASSIST Gateways wird angezeigt.

→ Das WeASSIST Gateway startet neu.

4 WeASSIST Gateway mit Tenant verknüpfen

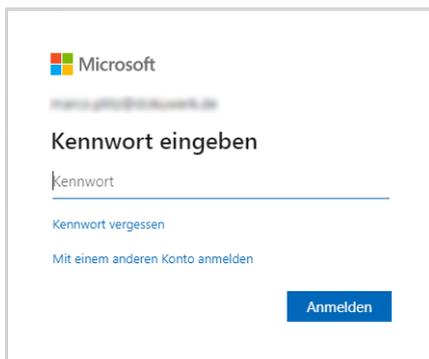

Bei der Bestellung der notwendigen Hardware wurde von WERMA ein Tenant angelegt und mit einer E-Mail-Adresse verknüpft. Über den Tenant werden alle Geräte im WERMA WeASSIST-System verwaltet. Die Zugangsdaten wurden per Bestätigungs-E-Mail von WERMA verschickt.

Zu Beginn muss das WeASSIST Gateway einmalig mit dem Tenant verknüpft werden.

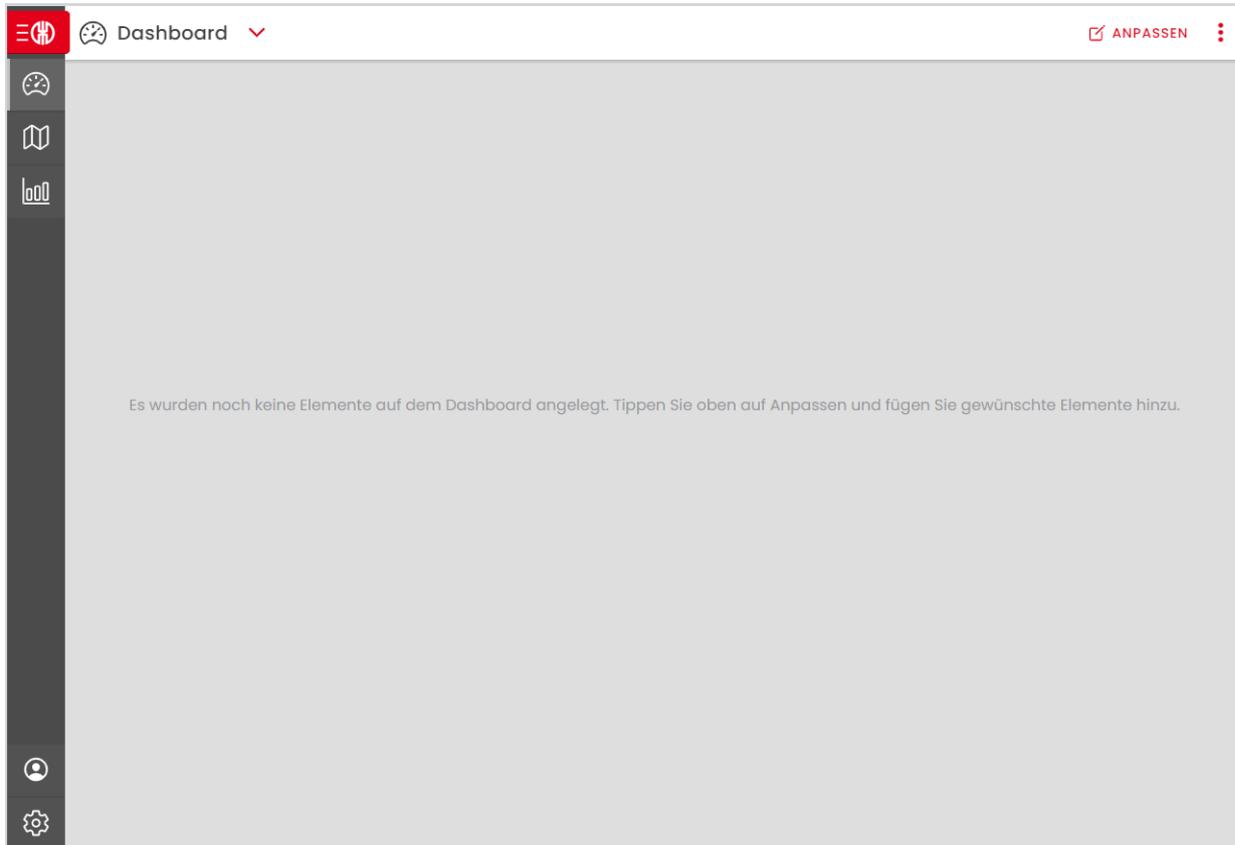

1. In der Bestätigungs-E-Mail auf **Einladung annehmen** klicken oder die Webseite <https://weassist.werma.com/> aufrufen.
→ Die Anmeldeseite von WeASSIST erscheint.

2. Dem Tenant zugeordnete E-Mail-Adresse eingeben und auf **LOGIN** klicken.

3. Kennwort eingeben und auf **Anmelden** klicken.
→ Das **Dashboard** von WeASSIST erscheint.

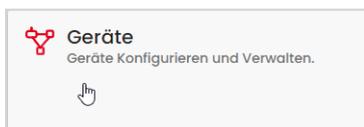

4. Links unten auf **Administration** klicken.

→ Der Bildschirm **Administration** erscheint.

5. Auf **Geräte** klicken.

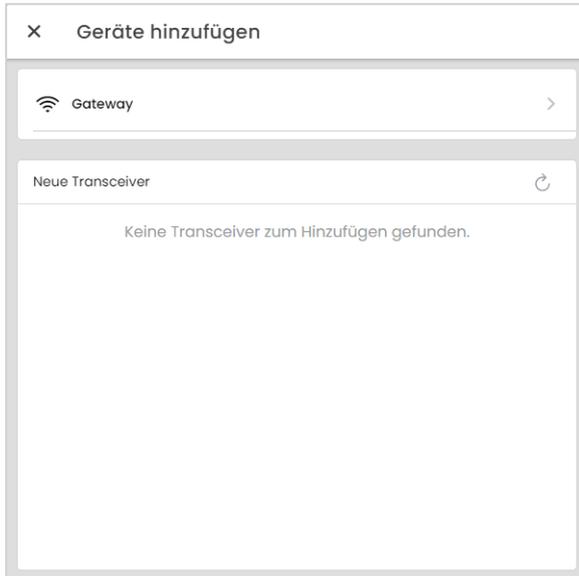

→ Die Bildschirm **Geräteübersicht** erscheint.

6. Auf **Gerät hinzufügen** klicken.

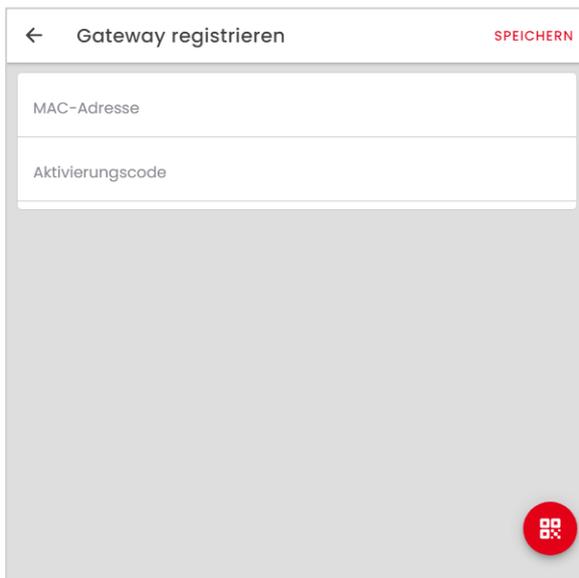

→ Der Dialog **Geräte hinzufügen** erscheint.

7. Auf **Gateway** klicken.

→ Der Dialog **Gateway registrieren** erscheint.

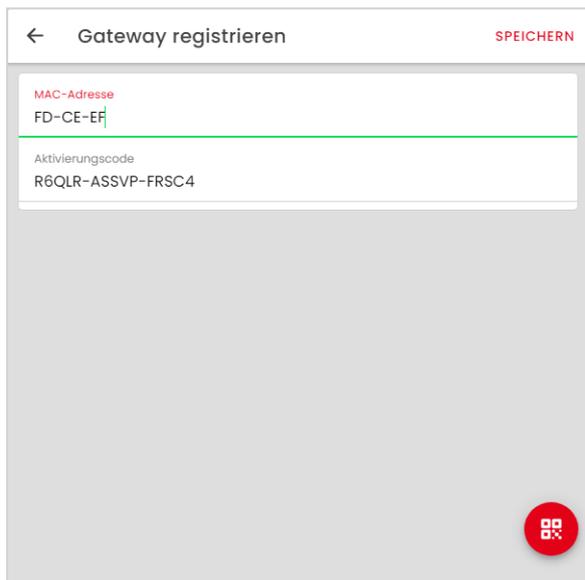

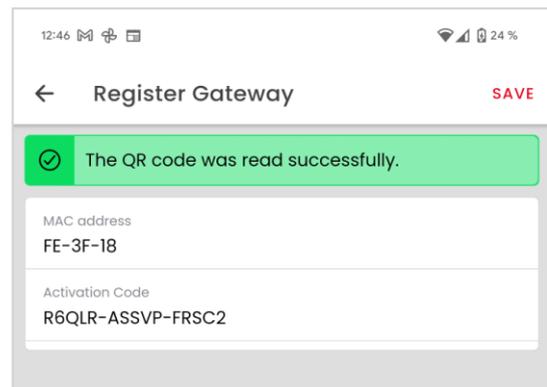

8. MAC-Adresse und Aktivierungscode des WeASSIST Gateways eingeben.

- oder -

Auf **Barcode scannen** klicken und Barcode auf der Rückseite des WeASSIST Gateways mit der Kamera scannen.

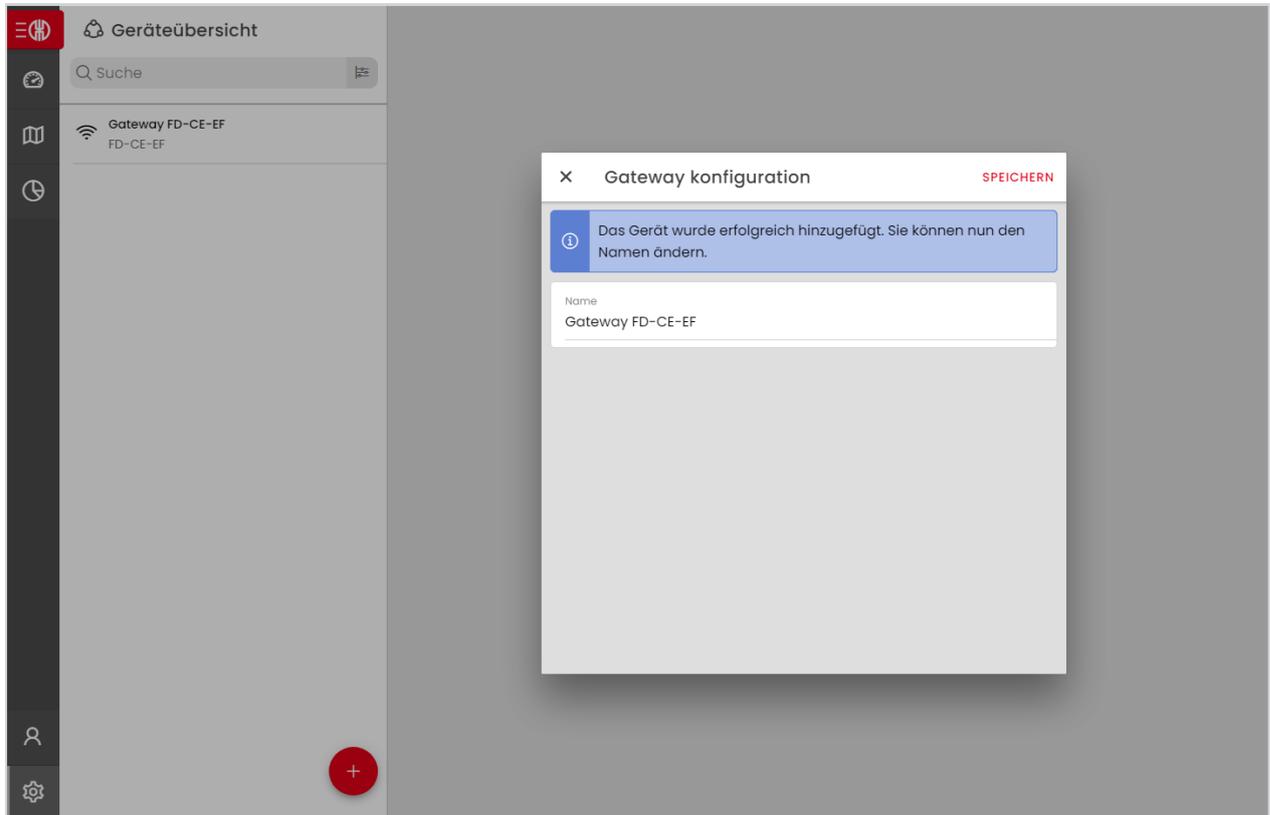

Der Barcode muss mit dem Tablet, Smartphone oder einer Kamera an dem Computer gescannt werden, auf dem die Einrichtung des Tenant durchgeführt wird.

A screenshot of a mobile application form titled "Gateway registrieren". The form has a back arrow on the left and a "SPEICHERN" button on the right. It contains two input fields: "MAC-Adresse" with the value "FD-CE-EF" and "Aktivierungscode" with the value "R6QLR-ASSVP-FRSC4". A red circular QR code scanning icon is located in the bottom right corner of the form area.A screenshot of a mobile application screen titled "Register Gateway". It shows a green success message: "The QR code was read successfully." Below the message, there are two input fields: "MAC address" with the value "FE-3F-18" and "Activation Code" with the value "R6QLR-ASSVP-FRSC2". The screen has a back arrow on the left and a "SAVE" button on the right. The status bar at the top shows the time as 12:46 and battery level at 24%.

9. Auf **Speichern** klicken.

→ Das WeASSIST Gateway wurde mit dem Tenant verknüpft und zur **Geräteübersicht** hinzugefügt.

10. Bei Bedarf Bezeichnung für das WeASSIST Gateway im Feld **Name** eingeben.

11. Auf **Speichern** klicken.

5 WeASSIST Transceiver verknüpfen

Nachdem das WeASSIST Gateway verknüpft wurde, können die WeASSIST Transceiver mit dem WeASSIST Gateway verknüpft und konfiguriert werden.

Sobald ein WeASSIST Transceiver an das Stromnetz angeschlossen wird, verbindet sich der WeASSIST Transceiver mit dem nächstgelegenen WeASSIST Gateway.

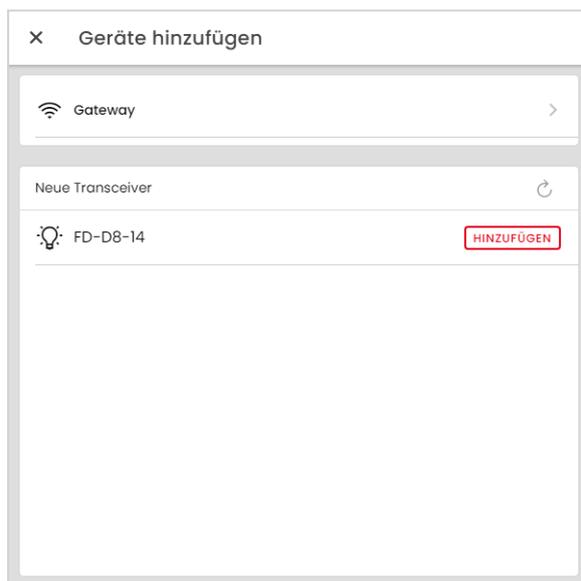

Beschädigung des WeASSIST Transceivers durch unsachgemäße Montage und Inbetriebnahme!

1. Mit dem WeASSIST Transceiver mitgelieferte Montageanleitung beachten.
2. WeASSIST Transceiver in der Signalsäule montieren und Signalsäule an das Stromnetz anschließen.
→ Der WeASSIST Transceiver verbindet sich mit dem nächstgelegenen Gateway.
3. Auf Gerät hinzufügen klicken.

→ Der Dialog **Geräte hinzufügen** erscheint.

→ Der WeASSIST Transceiver erscheint im Dialog **Geräte hinzufügen** im Bereich **Neue Transceiver**.

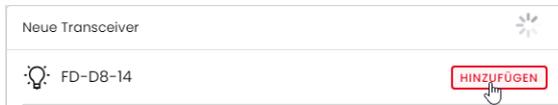

Falls der WeASSIST Transceiver nicht im Bereich **Neue Transceiver** erscheint:

4. Auf **Aktualisieren** klicken.

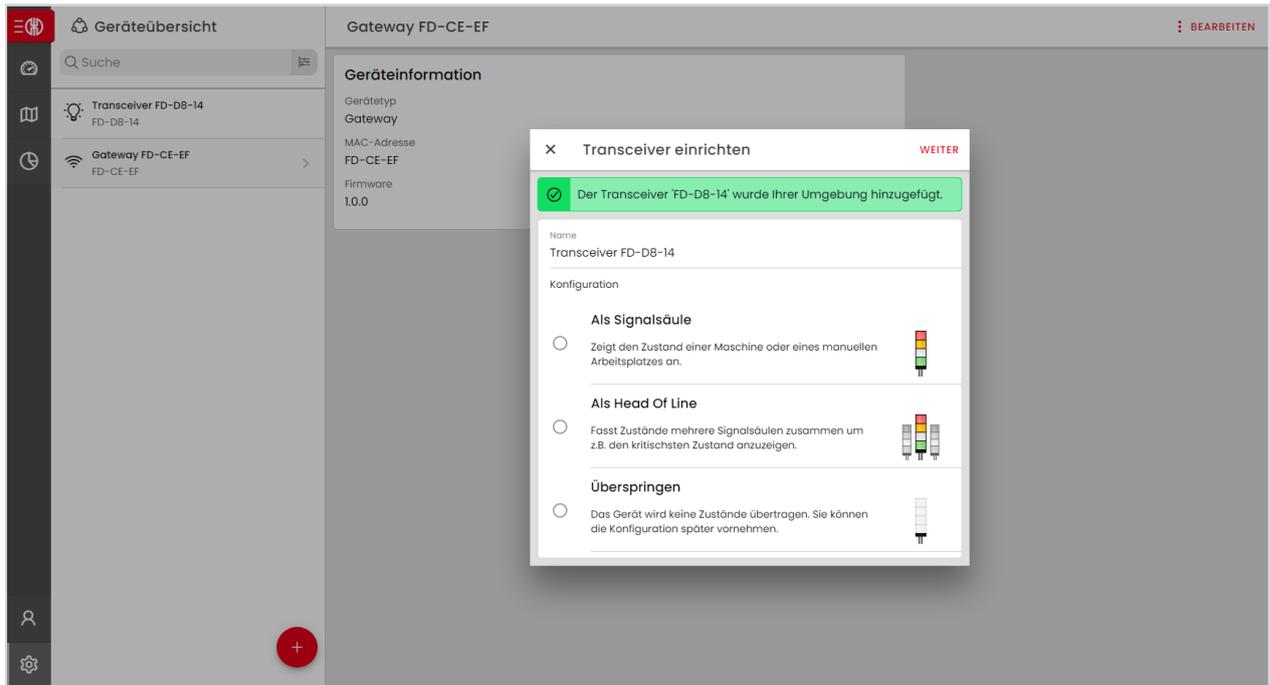

Sobald der WeASSIST Transceiver im Bereich **Neue Transceiver** erscheint:

5. Auf **Hinzufügen** klicken.

→ Der WeASSIST Transceiver wird mit dem WeASSIST Gateway verknüpft und erscheint in der **Geräteübersicht**.

6. Option **Als Signalsäule** oder **Als Head Of Line** wählen und auf **Weiter** klicken, um die Signalsäule zu konfigurieren.
- oder -
Option **Überspringen** wählen und auf **Weiter** klicken, um die Signalsäule zu einem späteren Zeitpunkt zu konfigurieren.

Informationen und Anleitungen zum Konfigurieren der Signalsäule sowie zur weiteren Konfiguration von WeASSIST stellt der WERMA Blog unter <https://www.werma.com/weassist> zur Verfügung.
